LIQUID HANDLING

PUMPS AND HIGH PRESSURE VALVES

LIQUID HANDLING PUMPS, M SERIES

CE

The Cheminert[®] M Series liquid handling pump is a syringe-free pump capable of delivering a bidirectional flow over six orders of magnitude.

The M Series is a positive displacement pump, which means that it is selfpriming and tolerant of any gas which may find its way into the fluid lines. There is no separate fill cycle, and the capacity is unlimited.

Two models are offered — the M6 with a flow range of 5 nl/min to 5 ml/min (10 ml/min intermittent), and the M50 with a range of 1 μ l/min to 25 ml/min (35 ml/min intermittent). The M6 is also available in a high pressure model, rated to 1500 psi.

RS-232 and RS-485 communication protocols are incorporated into the microprocessor-driven controller.

The included software package controls flow rates, flow direction, and metered volumes.

Operating principle

At the core of the pump is a polymeric rotor housing four pistons in inert cylinders. As the microstepper motor turns the rotor, the pistons float on a stationary cam; at any given moment, one piston is filling, one is dispensing, and the other two are in transit between the fill and dispense positions.

	М6НР	CP-DSM			
	M50	CP-DSM2			
Controller	M-Force	CP-CMF			
Standoff	2"	2SOAMPCP			
assembly*	3"	3SOAMPCP			
	4"	4SOAMPCP			
	6"	6SOAMPCP			

Prod No

* Adding a standoff will change the backlash. Consult factory for further information.

APPLICATIONS

- Flow cytometry, cell and drug perfusion
- HTS and robotic systems
- Infusion and microdialysis
- Micro diluters/dispensers for nl to ml range applications
- Micro liquid transfers (nl) for micro arrays
- Microtiter plate dispensing using multiposition valves

WATCH A VIDEO

The continuous fill/ dispense design of this pump is demonstrated in a youtube video..

TECH TIP Use a standoff assembly

if the motor must be separated from the pump head. Standoffs are available in lengths of 2", 3", 4", and 6".

SPECIFICATIONS

(

	M6	M6HP	M50	
Continuous minimum flow	5 nl/min	5 nl/min	100 nl/min	
Continuous maximum flow	5 ml/min	5 ml/min	25 ml/min	
Maximum back pressure	100 psi	1500 psi	100 psi	
Gravimetric precision for 125 μl for 1.25 ml	0.50% 0.05%	0.50% 0.05%	0.80% 0.10%

Ultra-high pressure injector system

LIQUID HANDLING

40,000 PSI ULTRA-HIGH PRESSURE INJECTOR SYSTEM

The VICI 40K injector is comprised of six miniature air actuated needle valves, plumbed to simulate the flow path of a conventional rotor/stator injector. An integral controller sends the on/off positioning signals to each valve, coordinating them to perform load, inject, and flush functions. There are three methods for sending positioning commands to the injector:

- Manual control with the push buttons on the controller
- Laboratory computer via serial port communication
- Contact closure inputs

LIQUID HANDLING

40,000 PSI ULTRA-HIGH PRESSURE VALVES

The ultra-high pressure valves that are the heart of our SPSS40 (previous page) are now available individually, in 1/16", 1/32", and 360 micron versions.

There are three types – a two port on/ off valve, a dual on/off valve, and a 3-way prime/purge valve. (See page 198-63 for flowpath schematics.) The dual on/off configuration has two individually controlled outlets with a common inlet (or vice versa), emulating a rotary three way valve. Implementation requires a single three-way solenoid: application of 50 psi opens the valve; venting the air allows the spring to return the valve to the closed position. A fitting for 1/8" air supply tubing is included; two fittings are included for dual valves. (*Fitting: prod no EAOR21, page 196.*)

ON/OFF VALVE
