

Solvent Filtration Set with 1000ml Flask Bottle

The vacuum filter is a laboratory equipment, in the technical chromatographic, for the removal of column life and impurity detection system accuracy, plays an important role. In the filtration process, the liquid degassing effect is obvious. The equipment for different purposes of membrane filtration has been applied in weight analysis, chromatography, colloidal separation and other tests.

Main parameters

Material	: borosilicate glass 3.3
Cup capacity	: 300 ml
Flask Bottle receiving capacity	: 1000 ml
Connector	: 40 mm
Outer diameter of sand core	: 60 mm
Inner diameter of sand core	: 42 mm
Membrane filter diameter	: 47 mm / 50 mm

Ordering Information

Part No	Descriptions
260201	Filtration Apparatus, 1000mL, completed
260202	Filtration Apparatus, 2000mL, completed
260203	300ML Funnel
260204	Fritted support, Sand Core, 40/38
260205	Aluminum Clamp
